Sahmoe, J. E. SPECIES ACCOUNT
 1982

Eptesicus fuscus
 AZ, Pima Co., 5 mi E, 7 mi S Oracle,
 T14 S, R26 E, Sec. 20, NE 1/4, el. 4600 ft.
 30 Aug 1982

Noticable because of continuous
 buzzlike chatter. I think they were
 annoyed because we disturbed them.
 While handling them, it was ne-
 cessary to avoid continuously open
 mouth and bared teeth.

They seem to like protective crevices
 such as holes in a building siding.
 Young were smaller (lighter weight)
 and were being in with adults.
 All animals were found chirped
 probably important for thermal
 regulation.

AZ, Pima Co 2 mi N, 7 mi E Tucson,
 T14 S, R20 E, Sec. 11, NW 1/4, el. 2400 ft.
 14 Sept 1982

2 E. fuscus were found hung
 side by side under a bridge.
 They were dormant until handled.
 Then they became alert and bared
 teeth; made noises at me, and
 tried to bite.
