

THE INTERNET & PHYSIOLOGY

The Internet is a wonderful tool for exploring physiology. Below are a few resources that will get you started on your exploration.

National Library of Medicine <http://www.nlm.nih.gov/>

-from here you can access all kinds of information, including MEDLINE

BioMedNet <http://www.biomednet.com>

- good site with a plethora of links to other biologically & medically-related sites

The American Physiology Society <http://www.faseb.org/aps/>

Frontiers in BioScience <http://www.bioscience.org/mainpage.htm>

WWW Virtual Library <http://vlib.stanford.edu/NG/Home.html>

-from here go to Science→Bioscience→ Physiology & Biophysics Science

National Science Foundation <http://www.nsf.gov/>

Net-Vet and Electronic Zoo <http://netvet.wustl.edu/>

Scientific American <http://www.sciam.com>

You will need to search (and cite) the primary literature in order to complete your term paper. Several nice databases exist to help you access journal articles.

Go to U of A's library page & click on 'Indexes to Articles & More' ICON & use the scroll table on the bottom left to access Index Titles.

Following are examples of databases that will lead to primary literature in physiology:

-Web of Science

-Medline

-Biomednet
